Project Design Phase-II Customer Journey Map

Quotes Recommendation Chatbot using Rasa NLU

Date	07 March 2026
Team ID	SmartBridge-EL-2026
Project Name	Quotes Recommendation Chatbot using Rasa NLU
Maximum Marks	As per evaluation criteria

SmartBridge Experiential Learning Program
Team Members: Vansh Malhotra | Varun Gaikwad | Vedika Tandulwadkar | Vidisha Jain

Scenario: A user discovers, uses, and returns to the Quotes Recommendation Chatbot

User Persona: Priya — a 22-year-old college student who frequently seeks motivational content

Dimension	Entice How user discovers the chatbot	Enter User opens & starts chatbot	Engage User interacts with chatbot	Exit User gets quote & wraps up	Extend User returns / shares
Steps	Sees project link shared by a friend or finds it on GitHub while searching for chatbot examples	Opens browser → navigates to http://127.0.0.1:5000 → Chat UI loads instantly	Types 'hi' → Bot welcomes and lists categories Types 'give me motivation' → Receives quote Types 'something funny' → Gets humorous quote	Types 'bye' → Bot replies 'Goodbye! Stay positive.' Closes the browser tab	Copies and shares quote on Instagram/WhatsApp Returns next day when feeling demotivated again
Goals & Motivations	Help me find a simple tool that gives me quotes without ads	Help me start quickly without login or setup	Help me get the exact type of quote I want just by typing naturally	Help me end the conversation cleanly and take the quote with me	Help me remember this tool and come back when I need motivation again
Positive Moments	Simple GitHub README explains the project clearly	No login required — chat starts instantly after opening URL	Bot understands natural language — 'tell something funny' works perfectly Quote response is instant (< 2s)	Clean goodbye response — feels like a real conversation ending	Quote is easy to copy. Chatbot becomes go-to daily tool for motivation
Negative Moments	Requires Python 3.9 and Rasa setup — high barrier for non-technical users	User must start two terminals manually — not a one-click experience	If input doesn't match any intent, fallback response may feel unsatisfying Only one quote per request — no randomisation visible	No option to request another quote of the same category without retyping	No bookmark or history feature — quotes not saved for later
Opportunities	Create a one-click installer or Docker container for non-tech users	Add a single startup script that launches both servers automatically	Add 'give me another' intent to request a different quote Add voice input support in future	Add 'send me more like this' option to continue in same category	Add quote history / favourites. Integrate with Telegram for daily notifications
